

Skills

- **Programming Languages:** Go, Javascript, Python
- **Technologies & Tools:** MongoDB, Redis, PostgreSQL, MySQL, RabbitMQ, gRPC, Node.js, Express.js, Docker, Git, GoLand

Work Experience

Backend Engineer **Muvr Technologies, Inc.** **September 2025–Present**
Remote, United States

Muvr is an on-demand logistics platform that connects customers with movers, haulers, and couriers for moving, delivery, and junk removal, with real-time tracking, transparent pricing, and flexible scheduling.

- Developed backend APIs including CRUD operations and business logic calculations, along with unit tests, for Muvr services using Node.js, Go, MySQL, and Redis, improving system reliability and performance.
- Implemented a payment system supporting referral and promo codes using Stripe Payment Intents, integrating it with Express.js backend services to enable secure and flexible transactions.
- Developed role-based access control using Auth0, enabling secure authentication and efficient admin user management.

Backend Engineer **PT Harmoni Mitra Jayandra -** **November 2023–September 2025**
onsite placement at **PT. Elektronik Distribusi Otomatisasi Terkemuka (eDOT)**
Remote, Indonesia

PT Elektronik Distribusi Otomatisasi Terbuka (eDOT) is a Nabati Group subsidiary that empowers businesses with integrated digital solutions across sales, distribution, logistics, marketing, and enterprise systems.

- Developed backend APIs (CRUD, calculation, journal item generation) and unit tests for the Finance and Accounting (FICO) project using Go, MongoDB, Redis, and RabbitMQ, which enabled seamless generation of journal entries tied to core financial transactions.
- Led the FICO team (for 3 months) through multiple sprints by creating tasks, monitoring progress, and conducting merge request reviews in GitLab, resulting in a successful release and deployment.
- Implemented caching with Redis Index and Redis Query; optimized invoice final price calculation API using Go singleflight, Redis, and MongoDB, reducing response time from 500 ms to 250 ms for 50 concurrent users.

Backend Engineer **PT Harmoni Mitra Jayandra** **September 2021–November 2023**
Bandung, Indonesia

PT Harmoni Mitra Jayandra is a company specializing in IT software solutions. It provides web, mobile, and desktop-based software development services.

- Developed backend services and RESTful APIs for the Akreditasiku project using Go, Go-kit, and PostgreSQL, enabling multiple campuses to simulate and manage accreditation scores more efficiently.
- Created backend services for the Digital Bootcamp project using Go, Go-kit, Docker, and PostgreSQL, enabling PT Padepokan Tujuh Sembilan to train and manage technical talent effectively.
- Implemented QRIS payment integration using DANA QRIS for the Oripay project with Node.js and PostgreSQL, enabling seamless digital transactions.

Backend Engineer Intern **PT Kazee Digital Indonesia** **August 2020–Dec 2020**
Remote, Indonesia

PT Kazee Digital Indonesia is an Indonesian technology company that specializes in providing data-driven and AI-powered insights to help leaders make better decisions and drive impactful digital transformation.

- Developed services to migrate news data from MongoDB to Elasticsearch using Node.js, enhancing search functionality and enabling more effective data analytics.
- Conducted research and built proof-of-concepts on Neo4j and video conferencing libraries in Node.js, helping PT Kazee Digital Indonesia explore potential technology adoption for future products.
- Built multiple backend services for scraping and crawling data from social media and review platforms using Python, RabbitMQ, and MongoDB, enabling deeper user profiling and content analysis.

Education

● **Bachelor of Applied Science (S.Tr.) in Informatics Engineering**, Politeknik Negeri Bandung, Indonesia **2017–2021**
